Network Vulnerability Assessment

Targets: 10.0.0.5

Scan started 2026-09-21 14:13 UTC · finished 2026-09-21 14:15 UTC · report generated 2026-10-01 09:15 UTC

nmap 7.94SVN · CVE data: NVD API 2.0

Executive summary

1	4	3	22	2
hosts up	open ports	versions identified	unique CVEs	known exploited (CISA KEV)

2	7	13	0	0
Critical	High	Medium	Low	Unscored

Unique CVEs by CVSS severity. A CVE affecting several hosts is counted once.

Top findings

CVE	CVSS	Severity	Affected	Summary
CVE-2021-42013 **[KEV]**	9.8	Critical	10.0.0.5:80	[SAMPLE DATA - not from NVD] Example remote code execution.
CVE-2021-41773 **[KEV]**	7.5	High	10.0.0.5:80	[SAMPLE DATA - not from NVD] Example path traversal. Example path traversal. Example path traversal. Example path traversal.
CVE-2023-38408	9.8	Critical	10.0.0.5:22	[SAMPLE DATA - not from NVD] Example critical issue in a forwarded agent component.
CVE-2099-1004	8.3	High	10.0.0.5:80	[SAMPLE DATA - not from NVD] Filler entry to demonstrate the per-service cap.
CVE-2099-1009	8.3	High	10.0.0.5:80	[SAMPLE DATA - not from NVD] Filler entry to demonstrate the per-service cap.
CVE-2099-1014	8.3	High	10.0.0.5:80	[SAMPLE DATA - not from NVD] Filler entry to demonstrate the per-service cap.
CVE-2099-1003	7.3	High	10.0.0.5:80	[SAMPLE DATA - not from NVD] Filler entry to demonstrate the per-service cap.
CVE-2099-1008	7.3	High	10.0.0.5:80	[SAMPLE DATA - not from NVD] Filler entry to demonstrate the per-service cap.
CVE-2099-1013	7.3	High	10.0.0.5:80	[SAMPLE DATA - not from NVD] Filler entry to demonstrate the per-service cap.
CVE-2099-1002	6.3	Medium	10.0.0.5:80	[SAMPLE DATA - not from NVD] Filler entry to demonstrate the per-service cap.

KEV = listed in CISA's Known Exploited Vulnerabilities catalog; prioritise these first.

Host details

10.0.0.5 (web01.lab.local)

OS guess: Linux 5.4

Port	Service	Detected version	CVEs	Worst
22/tcp	ssh	OpenSSH 8.2p1 Ubuntu 4ubuntu0.5	2	Critical
80/tcp	http	Apache httpd 2.4.49	20	Critical
3306/tcp	mysql	Weird DB 5.1 café	0	-
9999/tcp	abyss	*not detected*	0	-

10.0.0.5:22/tcp – OpenSSH 8.2p1 Ubuntu 4ubuntu0.5

CVE	CVSS	Severity	Description
CVE-2023-38408	9.8	Critical	[SAMPLE DATA - not from NVD] Example critical issue in a forwarded agent component.
CVE-2020-14145	5.9	Medium	[SAMPLE DATA - not from NVD] Example information disclosure during key exchange.

Note: Distribution-packaged build: the vendor may have back-ported fixes without changing the version string. Check the distro security tracker before treating these as confirmed.

10.0.0.5:80/tcp – Apache httpd 2.4.49

CVE	CVSS	Severity	Description
CVE-2021-42013 **[KEV]**	9.8	Critical	[SAMPLE DATA - not from NVD] Example remote code execution.
CVE-2021-41773 **[KEV]**	7.5	High	[SAMPLE DATA - not from NVD] Example path traversal. Example path traversal. Example path traversal. Example path traversal.
CVE-2099-1004	8.3	High	[SAMPLE DATA - not from NVD] Filler entry to demonstrate the per-service cap.
CVE-2099-1009	8.3	High	[SAMPLE DATA - not from NVD] Filler entry to demonstrate the per-service cap.
CVE-2099-1014	8.3	High	[SAMPLE DATA - not from NVD] Filler entry to demonstrate the per-service cap.
CVE-2099-1003	7.3	High	[SAMPLE DATA - not from NVD] Filler entry to demonstrate the per-service cap.
CVE-2099-1008	7.3	High	[SAMPLE DATA - not from NVD] Filler entry to demonstrate the per-service cap.
CVE-2099-1013	7.3	High	[SAMPLE DATA - not from NVD] Filler entry to demonstrate the per-service cap.
CVE-2099-1002	6.3	Medium	[SAMPLE DATA - not from NVD] Filler entry to demonstrate the per-service cap.
CVE-2099-1007	6.3	Medium	[SAMPLE DATA - not from NVD] Filler entry to demonstrate the per-service cap.
CVE-2099-1012	6.3	Medium	[SAMPLE DATA - not from NVD] Filler entry to demonstrate the per-service cap.
CVE-2099-1017	6.3	Medium	[SAMPLE DATA - not from NVD] Filler entry to demonstrate the per-service cap.
CVE-2099-1001	5.3	Medium	[SAMPLE DATA - not from NVD] Filler entry to demonstrate the per-service cap.
CVE-2099-1006	5.3	Medium	[SAMPLE DATA - not from NVD] Filler entry to demonstrate the per-service cap.
CVE-2099-1011	5.3	Medium	[SAMPLE DATA - not from NVD] Filler entry to demonstrate the per-service cap.

+5 more CVEs for this service; see the JSON/CSV export.

10.0.0.5:3306/tcp – Weird DB 5.1 café

Note: Version detected but nmap supplied no CPE to query NVD with. Try --keyword-fallback (noisy, low confidence) or look the product up manually.

10.0.0.5:9999/tcp – abyss

Note: No version fingerprint, so the service cannot be mapped to CVEs. Re-scan with a higher --intensity or check the service manually.

Method and limitations

Open ports and service versions were identified with nmap version detection (no exploitation, no NSE scripts). Each detected application CPE was queried against the NVD CVE API 2.0; severity is the CVSS base severity (v3.x preferred, then v4.0, then v2).

Treat results as leads, not confirmed vulnerabilities. Matching is based on the version a service reports. Distribution packages often back-port security fixes without changing the version string (false positives), and services that hide or alter their banners will be missed (false negatives). Configuration, authentication and UDP services are outside the scope of this scan. Validate findings before remediation and re-scan afterwards.
